

# 2016

9 February

## National Weather Service

Lubbock, Texas

### Presenting the 2016 Aviation Safety Workshop

West Texas sees many hazardous weather extremes in any given month. From thunderstorms to icing, from dust storms to low IFR conditions, we get it all...sometimes even in the same day. Join us for an evening of informative and engaging presentations focused on aviation weather hazards.

In aviation, *safety is no accident*. It must be planned. While pilot training provides a basic background in aviation weather services, continuing education is essential to keep both you, and those that put their lives in your hands, safe. Remember that weather related fatal events make up about a third of all fatal accidents. 2015 was a rather deadly year for aviation in West Texas. The more you know, the better equipped you will be to make the decisions related to having a safe flight.

#### Agenda

Three presentations are planned for this event with the help of our neighbors at the Amarillo and Albuquerque forecast offices.

#### CWS Who? A look inside NWS Center Weather Service Units

*Cindy Elsenheimer, NWS Amarillo*

#### Aircraft Icing Anticipation & Avoidance

*David Craft, NWS Albuquerque*

#### Fog—A Brief Review and Impacts on Aviation

*Felecia Bowser, NWS Lubbock*

After the presentations, we invite you to tour\* the National Weather Service facility.

(Non-United States citizens must obtain prior approval\*)

*The remains of N301D after colliding with a guy wire on the KCBD TV Tower*
